

To play mp3 disks in you car or at home on your stereo system.

- You need an mp3 capable CD player AND a transmitter to your FM radio.
- The transmitter plugs into the headset output on the mp3 player.
- Find a weak or blank FM station on your FM radio.
- Tune the FM transmitter to that station.
- You may need to turn up the headset output volume on the CD/mp3 player to get the signal to the FM transmitter.
- Use the volume and tone controls on your car or home radio, for the best sound.
- *The items shown were purchased for under \$40.00*

There is also available cassette adapters that will plug directly into a cassette player, this gives a more solid sound than the FM adapter, and is less expensive.
